

Radiological HAZAN Production Course

The course will familiarise delegates with the key areas involved in producing a hazard assessment and the potential problems and solutions.

Who is this course designed for?

The two-day course is specifically designed for individuals involved in producing, peer reviewing or managing the production of radiological hazard assessments for modern standard safety cases, associated with nuclear facilities. The course will familiarise delegates with the key areas involved in producing a hazard assessment and the potential problems and solutions.

How did the course develop?

The course evolved from UKAEA's highly effective in-house course and has been presented to delegates from UKAEA, contracting organisations and other licensees over the last five years.

The course draws upon UKAEA's extensive experience both in producing modern standard safety cases and in interacting with regulators and other licensees on the methodologies involved in producing radiological hazard assessments.

The course presenters have proven experience of hazard assessment and have been involved in the development of radiological assessment methodologies used in the production of UKAEA safety cases.

What areas does the cover?

Key areas covered include:

- Consequence and frequency analysis
- Design Basis Analysis
- ALARP Analysis and Risk Analysis
- Screening and categorisation
- Status of Safety Controls
- Forward Programmes

The course consists of interactive presentations and delegate exercises, which lead to the production of a radiological hazard assessment for a simplified facility.

When does the course run?

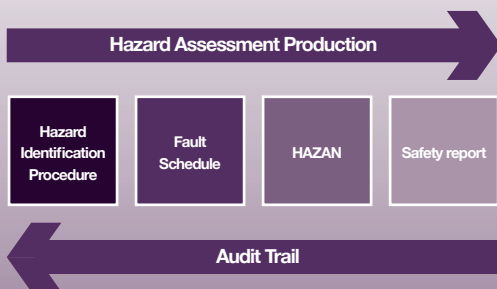

The radiological HAZAN production course can be run on request to suit your requirements and preferred location. Individuals can also attend pre-arranged courses.
